Programme Manager

Reduce cost of network development and maintenance programmes

ePIN Programme Manager enables you to dramatically reduce the cost and increase control of any multi-site programme of works that must adhere to common design, compliance or operational standards and processes.

With ePIN Programme Manager you can:

- Communicate standards and specifications quickly and easily
- Manage approvals on-line, from initiation through to completion
- Monitor programme adherence to whatever detail you require
- Maintain a complete audit trail of events
- Readily support international, multi-lingual initiatives

No in-house administration, or additional hardware or software is necessary. Each implementation is tailored to suit your precise project or operational needs and can be up and running in a matter of days rather than months.

Benefits

Whatever the size or type of undertaking, ePIN Programme Manager significantly reduces the cost of administration while increasing control of cost, quality and programme. For example:

Design changes to retail networks: Ensure consistency of execution, reduce administration overheads and release valuable managerial resource and enable your business to adapt faster.

Management of telecoms assets: Reduce the cost of administering upgrade and maintenance programmes, mitigate site or licensing compliance risks and maximise asset utilisation by maintaining up-to-date usage records.

Maintenance and minor works programmes for utilities: Avoid on-site complications by ensuring works crews have the right information at the right time, monitor and report on programme adherence and track cost against budgets and bench marks.

ePIN Programme Manager is the ultimate solution for reducing cost and increasing control of multi-site maintenance, design-change and refurbishment programmes, quickly and effectively.
